Ph./Mob.: 01972-233520, 94598-16580, 98053-11453**

## ABOUT THE COLLEGE

Dawarka Dass Memorial Sai College was set up in **3<sup>rd</sup> October, 2003** by Sai Society of Education (Kallar) in the memory of Late Shri Dwarka Dass Ji, who himself was a dedicated teacher. The institution is situated at village Kallar in a cool and calm environment free from noise and pollution which is about 1 KM. from Jalari station on the Nadaun to Hamirpur National Highway. Later on we have started two more professional courses D.El.Ed. and Law in 2007 and 2008 respectively. We equally, have dedicated and professionally competent faculty to meet the objectives laid down by the institution. Our institution is tirelessly working for a mission that aims to provide quality to teacher education. The need of the hour is to make teachers who are creative, innovative constructive and dynamic enough to instill these qualities in their students.

## ABOUT THE SEMINAR

The National Education Policy (NEP) 2020 is independent India's Third Education Policy and the first in quarter of a century. Its effectiveness must be assessed based on the extent to which it contributes to the realization of article 21A of the Constitution, addresses its segregated education system, is gender transformative and close the gap between the education for India's elites and its poor and historically marginalized groups including Dalits, Adivasis, Muslims.

Its implementation must contribute to improved realization of the RTE Act, lead to the strengthening the public education system and stem the rising commercialization of education. This policy brief makes seven recommendations for its implementation. States and National Governments should push the envelope on ensuring educational equity and non-discrimination, address the needs of children below six and above 14, confront privatization and commercialization of education, tackle the NPE's inbuilt risk of in formalization of education and operate with a more critical analysis of use of digital/IT tools. They must put in place a change management process for the upcoming governance reforms and strengthen the administrative backbone of the education system. Further, the government must ensure adequate resources for its implementation and amplifying mechanisms for citizen participation.

Education is one of the most powerful tools for transforming the whole nation into a digitally empowered society and knowledge economy. Both education and technology are interconnected are technology plays a crucial role in imparting education during challenging situation which is evident during the COVID-19 crisis. The global crises of the COVID-19 virus and the subsequent lockdowns imposed by the government to control the situation have forced the people to stay indoors which has impacted the education sector tremendously. Without the aid of Information and Communication Technology (ICT), it would have been impossible to continue the teaching-learning process during this unprecedented closure of educational institutions due to the

pandemic. Information and Communication Technology (ICT) in learning institutions has enhanced learning by greater heights. Though students from different backgrounds especially those who are from the economically backward section of the society are facing considerable number of challenges to continue the learning process with the help of online education system still with the help of Information and Communication Technology (ICT) educational institutions all over the world are trying their level best to address the situation. In order to keep pace with the current trend of globalization, there is a need of constantly improvising our skills. Proper implementation of the National Education Policy-2020 in its true sense has the potential to bring remarkable changes by transforming the Indian Education System. The main aim of National Education Policy-2020 is to fill the gap of present education system which is totally mechanized which develops the cramming power of the students but curbs the individual thinking capability of the students. It also interrupts the free thinking of the students. Switching the method of education from rote learning to project/activity based or experiential learning will enrich the learning experience of the learners through hands-on training experience. It will help to promote scientific temperament among the young learners.

## **THEME: “Challenges and Opportunities in Implementation of National Education Policy-2020”**
